DETAILED ACTION

This action is in response to Request for Continued Examination and Amendment filed February 17, 2006. Claims 1, 9, 10, 12, 14, 19, 21, 24, 25 and 27 have been amended, claims 13, 17, 18, 22, 23, 27 and 28 have been cancelled and claims 30-41 have been added as requested by the applicant.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a solar collection product, classified in class 359, subclass838.
- II. Claims 12, 15, 19 and 21, drawn to a method of making a solar collector using adhesive, classified in class 359, subclass 850.
- III. Claims 14 and 16, drawn to a method of making a plurality of solar collectors on a one-sided mandrel, classified in class 359, subclass 850.
- IV. Claim 24, drawn to a method of making a plurality of solar collectors on a two-sided mandrel, classified in class 359, subclass 850.
- V. Claims 25 and 29, drawn to a method of making a solar collector using expanding foam, classified in class 359, subclass 850.
- VI. Claims 30-34, drawn to a method of making a solar collector using a vacuum bag, classified in class 359, subclass 850

Application/Control Number: 09/543,622

Art Unit: 2872

VII. Claims 35-41, drawn to a method of making a solar collector using a laminate, classified in class 359, subclass 850.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-VII are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case using adhesive, expandable foam, a vacuum bag, laminate, a one-sided mandrel or a two-sided mandrel can make the product.

Inventions II, III, IV, V, VI and VII are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the processes of making a solar collector have mutually different designs as stated above.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/543,622

Art Unit: 2872

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 2872

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua L. Pritchett whose telephone number is 571-272-2318.

The examiner can normally be reached on Monday - Friday 7:00 - 3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew A. Dunn can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
